

Super freezing

Use the super-freezing feature when you're storing food in the freezer: this option makes different groceries freeze even faster, so all the necessary nutrients remain intact.

Door alarm

A beeping signal will sound if you leave the refrigerator door open for longer than is recommended, reminding you to close it and stop the warm air from raising the inside temperature.

Super cooling

Want those drinks you've just put in the fridge to be very cold, very fast? No worries – our useful super cooling feature is here to the rescue, just in time for an important game or a favorite movie.

Total No Frost

Total No Frost is a function based on the circulation of cold air that reduces humidity and prevents the accumulation of frost on the food in the refrigerator and ice on the walls of the freezer compartment. The refrigerator and freezer compartments have separate airflow so that odors cannot mix between the compartments. Unlike conventional systems, Total No Frost cools both separate units faster.

LED light

LED light lasts longer when compared to conventional lighting, and it enables more efficient and reliable inside illumination - so you can easily see every corner of the fridge.

Multi Air Flow system

Keeping a constant temperature in the fridge is important, which is why Multi and DynaCool Air Flow systems distribute the air evenly into every part of the device, keeping it constantly ideal.
