

Metal cooling

Metal cooling technology maintains the desired temperature in the refrigerator, thanks to a metal panel sheet on the backside. It also helps with faster cooling and higher humidity levels.

Dual inverter compressor

Choose great temperature precision and consistency with Dual inverter technology: an innovation that helps you significantly reduce energy consumption and noise levels.

Total No Frost

Total No Frost is a function based on the circulation of cold air that reduces humidity and prevents the accumulation of frost on the food in the refrigerator and ice on the walls of the freezer compartment. The refrigerator and freezer compartments have separate airflow so that odors cannot mix between the compartments. Unlike conventional systems, Total No Frost cools both separate units faster.

Door alarm

A beeping signal will sound if you leave the refrigerator door open for longer than is recommended, reminding you to close it and stop the warm air from raising the inside temperature.

Convertible zone

With our variable temperature compartment, a dedicated part of the machine can be conveniently used as a freezer or a fridge – whatever you choose.

Multi Air Flow system

Keeping a constant temperature in the fridge is important, which is why Multi and DynaCool Air Flow systems distribute the air evenly into every part of the device, keeping it constantly ideal.
