

## Total No Frost

Total No Frost is a function based on the circulation of cold air that reduces humidity and prevents the accumulation of frost on the food in the refrigerator and ice on the walls of the freezer compartment. The refrigerator and freezer compartments have separate airflow so that odors cannot mix between the compartments. Unlike conventional systems, Total No Frost cools both separate units faster.

## Metal cooling

Metal cooling technology maintains the desired temperature in the refrigerator, thanks to a metal panel sheet on the backside. It also helps with faster cooling and higher humidity levels.

## Inverter Motor

The inverter compressor allows the appliance to operate quietly, ensuring uninterrupted cooling, reducing temperature fluctuations and power consumption, and also extending motor lifespan.

## Super Cooling

Want those drinks you've just put in the fridge to be very cold, very fast? No worries – our useful super cooling feature is here to the rescue, just in time for an important game or a favorite movie.

## Super Freezing

Use the super-freezing feature when you're storing food in the freezer: this option makes different groceries freeze even faster, so all the necessary nutrients remain intact.

## Door alarm

A beeping signal will sound if you leave the refrigerator door open for longer than is recommended, reminding you to close it and stop the warm air from raising the inside temperature.
